Week 02 Minutes

Date	08/10/2014
Time	15:30-16:25
Participants	Paul, Cynthia, Anthony, Kaiyu, Huayan
Recorder	Cynthia

What did we talk about?

- We showed the URD to the user and went through them on by one.

- Some of the requirements are not clearly stated and there are quite a few requirements are optional.

- Before we start coding, the most important thing we need to consider is how should the programs be designed and structured.

- We don't need to request another server, just use the school Linux server would be okay. Paul can give the access of another school server to us later if necessary.

- Next Wednesday Paul has staff meeting, he will email us his available time so that we can decide the meeting time then.

What are we going to do?

- Modify the user requirement document and ask for further suggestions
- Make lo-fi prototypes of the game
- Start to think and learn about program design and try to write short test codes if possible
